

Infinite loop-

```

1 package javasessions;
2
3 public class LoopsConcept {
4
5     public static void main(String[] args) {
6
7         //1 to 10
8         //1. while loop:
9
10        int i = 1;
11        while(i<=10) {
12            System.out.println(i);
13        }
14    }
  
```

Good while loop-

```

1 package javasessions;
2
3 public class LoopsConcept {
4
5     public static void main(String[] args) {
6
7         //1 to 10
8         //1. while loop:
9
10        int i = 1;
11        while(i<=10) {
12            System.out.println(i); //12345678910
13            i++; //11
14        }
15
16
17    }

```

1 to 10 is printed.

++i also prints the same-

```

1 package javasessions;
2
3 public class LoopsConcept {
4
5     public static void main(String[] args) {
6
7         //1 to 10
8         //1. while loop:
9
10        int i = 1;
11        while(i<=10) {
12            System.out.println(i); //12345678910
13            //i++; //11
14            ++i;
15        }

```

Prints 1 to 10.

This way of incrementing also works-

```
LoopsConcept.java
1 package javasessions;
2
3 public class LoopsConcept {
4
5     public static void main(String[] args) {
6
7         //1 to 10
8         //1. while loop:
9
10        int i = 1;
11        while(i<=10) {
12            System.out.println(i); //12345678910
13            //i++; //11
14            //++i;
15            i=i+1;
16        }
17
18    }
```

Prints 1 to 10.

Print odd numbers between 1 to 10-

```
LoopsConcept.java
1 package javasessions;
2
3 public class LoopsConcept {
4
5     public static void main(String[] args) {
6
7         //1 to 10
8         //1. while loop:
9
10        int i = 1;
11        while(i<=10) {
12            System.out.println(i); //12345678910
13            //i++; //11
14            //++i;
15            i=i+2;
16        }
17
18    }
19
20 }
```

1,3,5,7,9.

Break-

```

1 package javasessions;
2
3 public class LoopsConcept {
4
5     public static void main(String[] args) {
6
7         //1 to 10
8         //1. while loop:
9
10        int i = 1;
11        while(i<=10) {
12            System.out.println(i); //12345678910
13            i++; //11
14            //++i;
15            //i=i+1;
16            break;
17        }
18
19
20

```

Output is 1.

Not goes inside loop-
paste while 6 –

```

1 package com.day6;
2
3 public class while6 {
4
5     public static void main(String[] args) {
6
7         //not goes inside while loop.
8
9         int k=1;
10        while(k>=50) {
11            System.out.println("hello");
12        }
13        System.out.println("outside while"); //outside while
14    }
15
16 }
17
18 //1
19

```

```

18
19 //
20 int k=1;
21 while(k<=50) {
22     System.out.println("hello");
23     k++;
24 }
25

```

```

25
26 //1 to 50
27 int p =1;
28 while(p<=50) {
29     System.out.println(p);//1
30     if(p==5) {
31         System.out.println("bye");
32         break;
33     }
34 }
35

```

Prints 1 infinite times as not breaking.

```

25
26 //1 to 50
27 int p =1;
28 while(p<=50) {
29     System.out.println(p);//12345
30     if(p==5) {
31         System.out.println("bye");
32         break;
33     }
34     p++; //5
35 }
36

```

```

1
2
3
4
5
bye

```

```

1 package com.day6;
2
3 public class while9 {
4
5     public static void main(String[] args) {
6
7         //while with if and without break|.
8         //    without break.
9         //when we write the counter inside if block wont work.
10        //counter has to be for while block.
11
12        int p=1;
13        while(p<=50) {
14            System.out.println(p);
15            if(p==5) {
16                System.out.println("byee");
17                p++;
18            }
19        }
20
21
22 }
23 }
24

```

```

1 package com.day6;
2
3 public class while11 {
4
5     public static void main(String[] args) {
6
7         //while with if and break.
8         //    with break.
9         //when we write the counter inside if block wont work.
10        //counter has to be for while block.
11
12        int p=1;
13        while(p<=50) {
14            System.out.println(p);
15            if(p==5) {
16                System.out.println("byee");
17                p++;
18                break;|
19            }
20        }
21
22 }
23 }
24 }
25
26 //prints 1 infinite times.
27

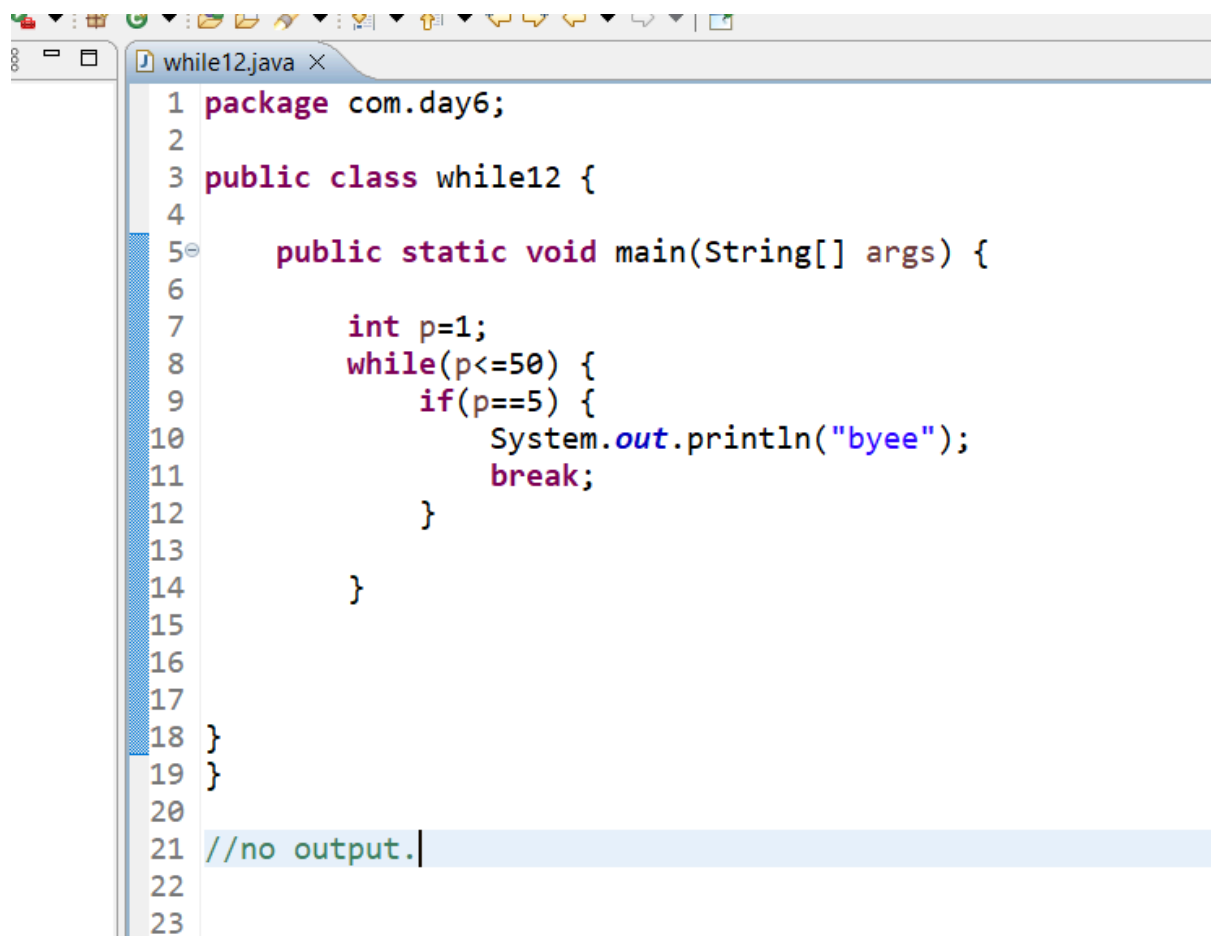

```

```

25
26 // 1 to 50
27 int p = 1;
28 while (p <= 50) {
29     //System.out.println(p); // 12345
30     if (p == 5) {
31         System.out.println("bye");
32         break;
33     }
34     p++;
35

```

bye

```

1 package com.day6;
2
3 public class while12 {
4
5     public static void main(String[] args) {
6
7         int p=1;
8         while(p<=50) {
9             if(p==5) {
10                 System.out.println("byee");
11                 break;
12             }
13
14         }
15
16
17
18 }
19 }
20
21 //no output.
22
23

```

//increment it before going inside if loop.

```

25
26      // 1 to 50
27      int p = 1;
28      while (p <= 50) {
29          System.out.println(p); // 12345
30          p++; // 5
31          if (p == 5) {
32              System.out.println("bye");
33              break;
34          }
35

```

Output- 1,2,3,4,bye.

Prints 10 to 1.

```

36
37      //10 to 1:
38      int t = 10;
39      while(t>=1) {
40          System.out.println(t); //10
41          t--;
42      }
43

```

Wont go inside loop.- blank output.

```

36
37      //10 to 1:
38      int t = -1;
39      while(t>=1) {
40          System.out.println(t); //10
41          t--;
42      }

```

--t also works-

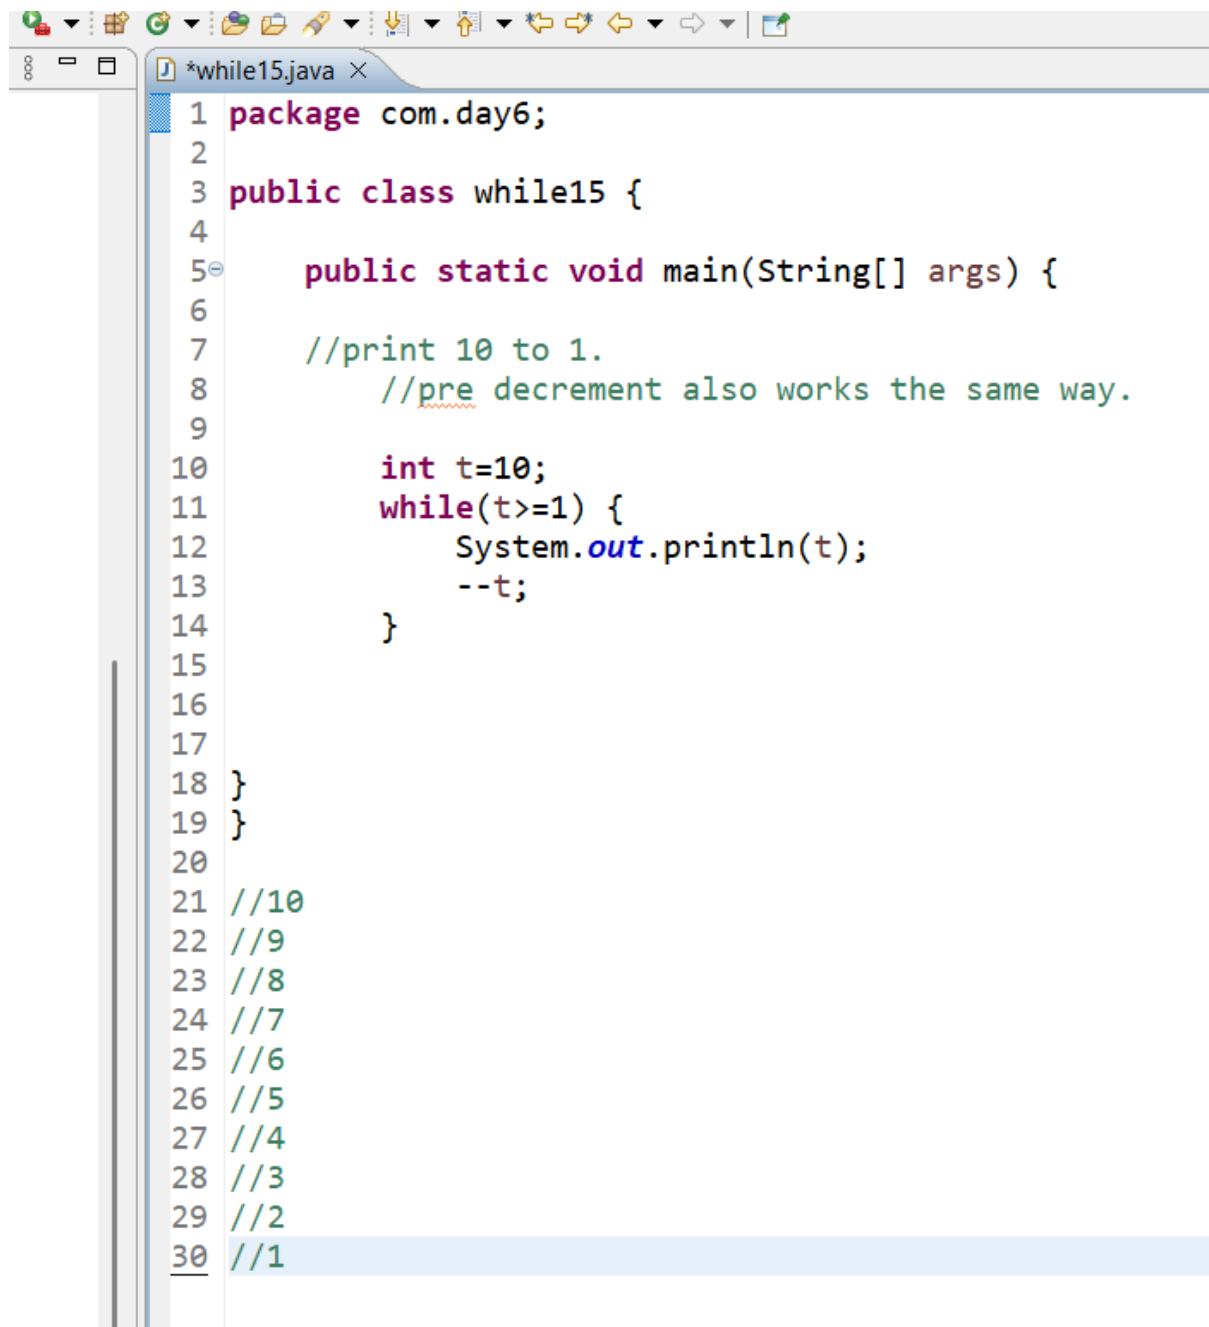

```

36
37      //10 to 1:
38      int t = 10;
39      while(t>=1) {
40          System.out.println(t); //10
41          //t--;
42          --t;
43      }

```

10 to 1.

paste while 15 –

A screenshot of a Java IDE window titled '*while15.java'. The code is as follows:

```
1 package com.day6;
2
3 public class while15 {
4
5     public static void main(String[] args) {
6
7         //print 10 to 1.
8         //pre decrement also works the same way.
9
10        int t=10;
11        while(t>=1) {
12            System.out.println(t);
13            --t;
14        }
15
16
17
18 }
19 }
20
21 //10
22 //9
23 //8
24 //7
25 //6
26 //5
27 //4
28 //3
29 //2
30 //1
```

t=t-1 also works-

```

36
37      //10 to 1:
38      int t = 10;
39      while(t>=1) {
40          System.out.println(t); //10987654321
41          //t--;
42          //--t;
43          t=t-1; //0
44      }
45

```

Prints 10 to 1.

negative – another while condition check–

```

36
37      //10 to 1:
38      int t = 10;
39      while(t>=-1) {
40          System.out.println(t); //109876543210-1
41          //t--;
42          //--t;
43          t=t-1; //-1
44      }
45

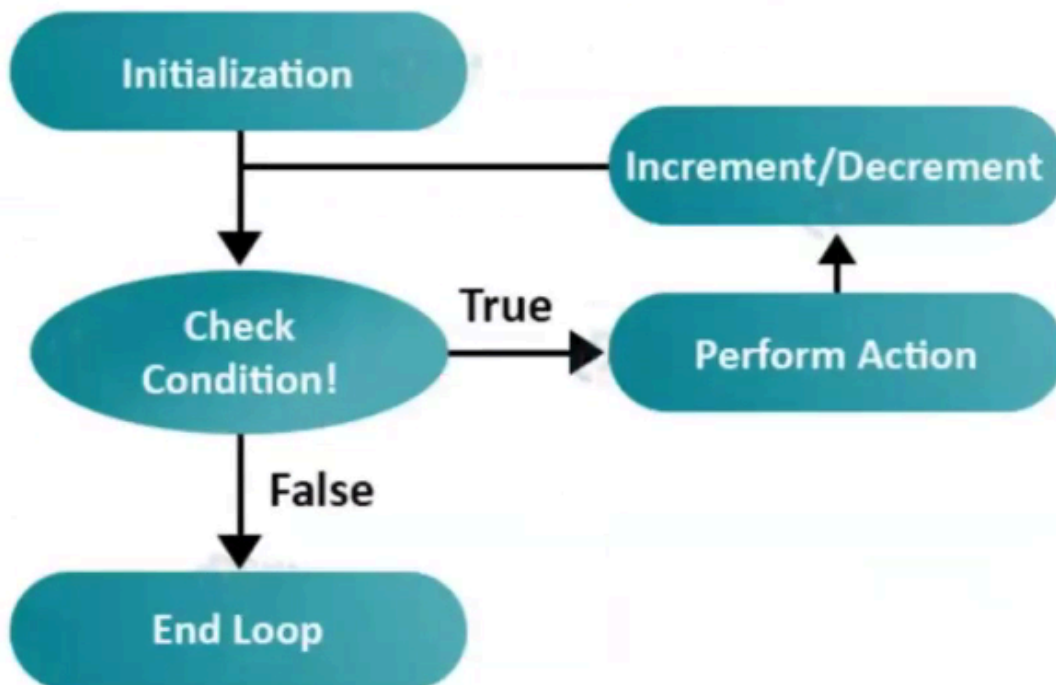

```

Prints 10 to -1.

Doesn't go inside while-

```
36  
37 //10 to 1:  
38 int t = -10;  
39 while(t>=-1) {  
40     System.out.println(t); //109876543210-1  
41     //t--;  
42     //--t;  
43     t=t-1; //-2  
44 }  
45
```

Flow Diagram for Forloop

```
/*Hello*/ }
```

```
48
49
50 //2. for loop:
51 //1 to 10:
52 for(int d=1; d<=10; d++) {
53     System.out.println(d); //12345678910
54 }
55
```

1 to 10 is printed.

Without increment decrement-

```
49
50 //2. for loop:
51 //1 to 10:
52 for(int d=1; d<=10; ) {
53     System.out.println(d); //12345678910
54 }
55
```

1 is printed infinite times.

another way to write for loop-

```
49
50 //2. for loop:
51 //1 to 10:
52 for(int d=1; d<=10; ) {
53     System.out.println(d); //12345678910
54     d++;
55 }
56
```

Prints 1 to 10.

Don't give the condition-

```

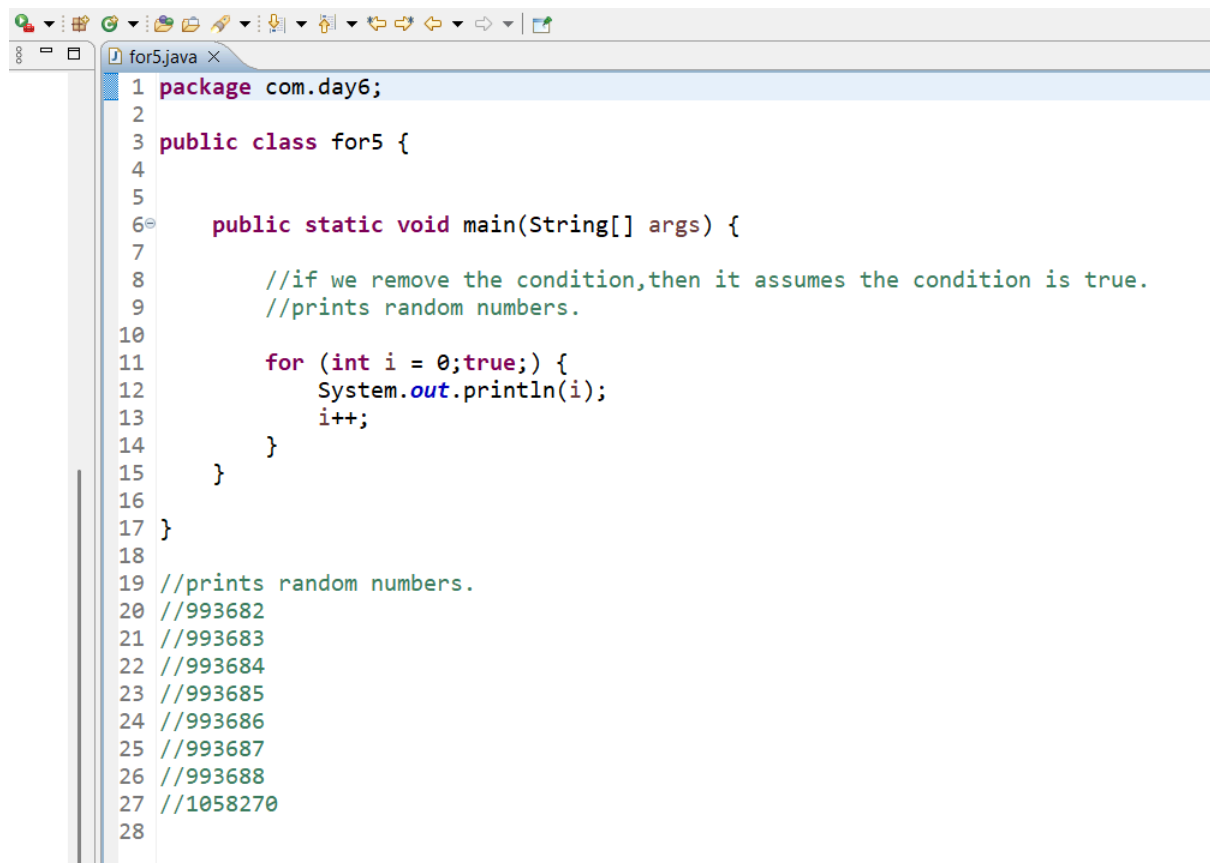

48
49
50      //2. for loop:
51      //1 to 10:
52      for(int d=1; ; d++) {
53          System.out.println(d); //12345678910
54      }
55

```

Gives random number in output.

By default condition is assumed true when not specified.

paste for 5

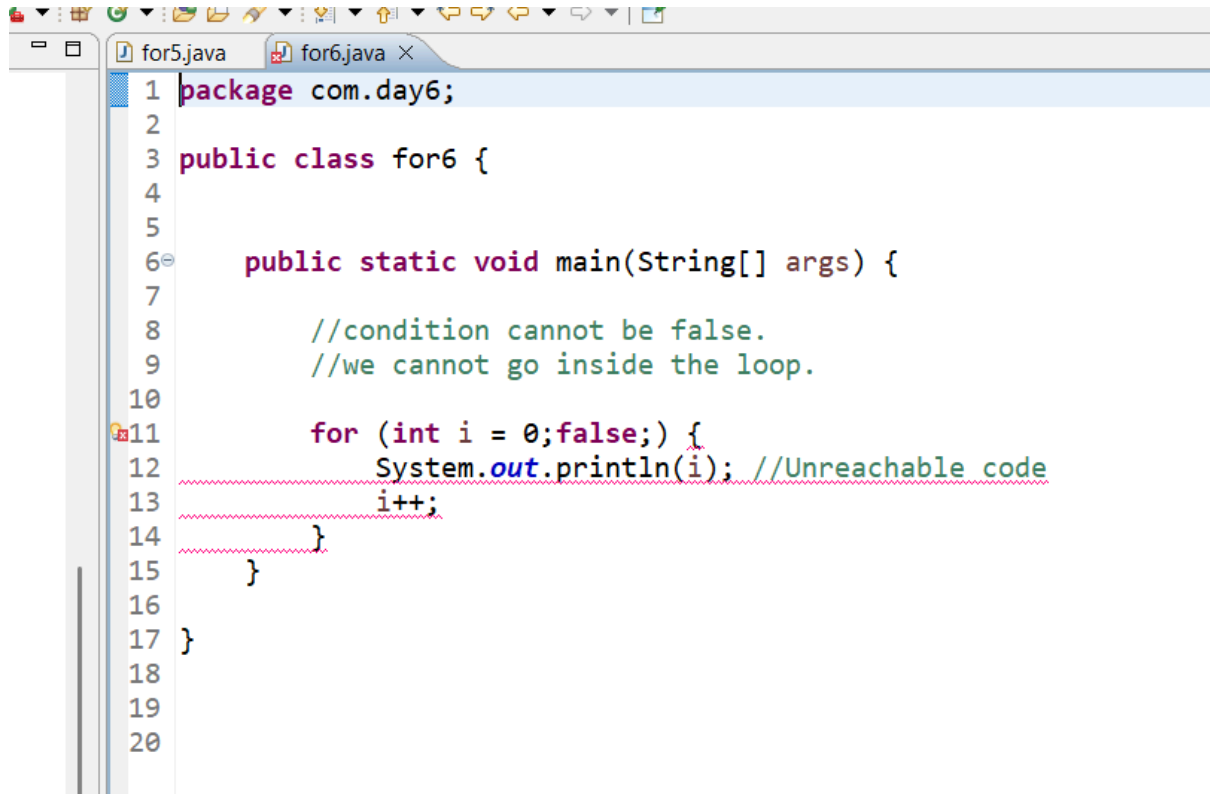

```

1 package com.day6;
2
3 public class for5 {
4
5     public static void main(String[] args) {
6
7         //if we remove the condition, then it assumes the condition is true.
8         //prints random numbers.
9
10        for (int i = 0; true;) {
11            System.out.println(i);
12            i++;
13        }
14    }
15 }
16
17 //prints random numbers.
18 //993682
19 //993683
20 //993684
21 //993685
22 //993686
23 //993687
24 //993688
25 //1058270
26

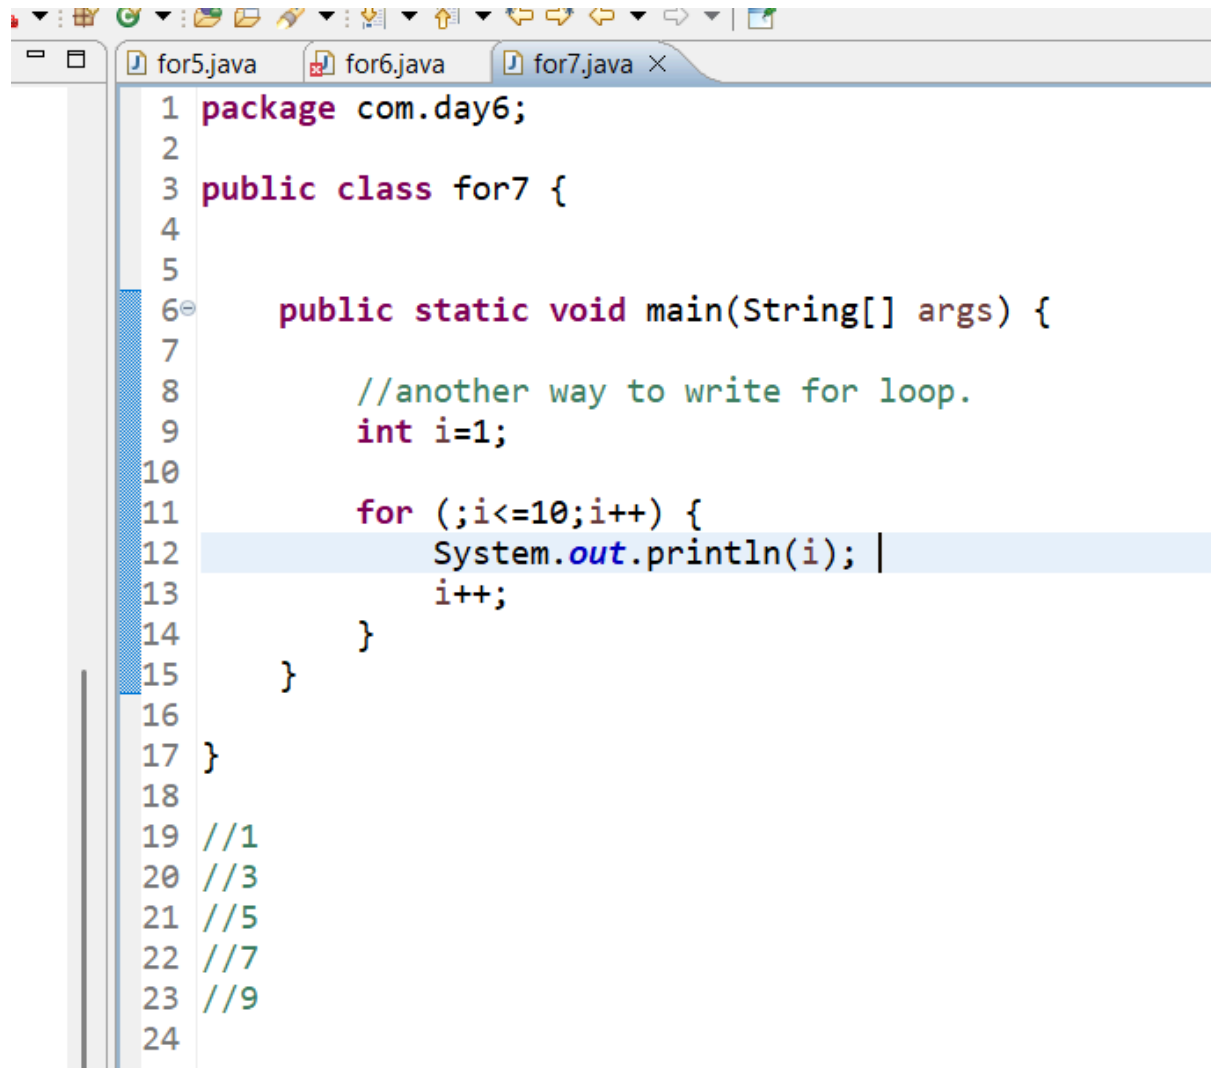

```

Cannot write false here-
paste for 6

```
1 package com.day6;
2
3 public class for6 {
4
5
6     public static void main(String[] args) {
7
8         //condition cannot be false.
9         //we cannot go inside the loop.
10
11         for (int i = 0;false;) {
12             System.out.println(i); //Unreachable code
13             i++;
14         }
15     }
16
17 }
18
19
20
```

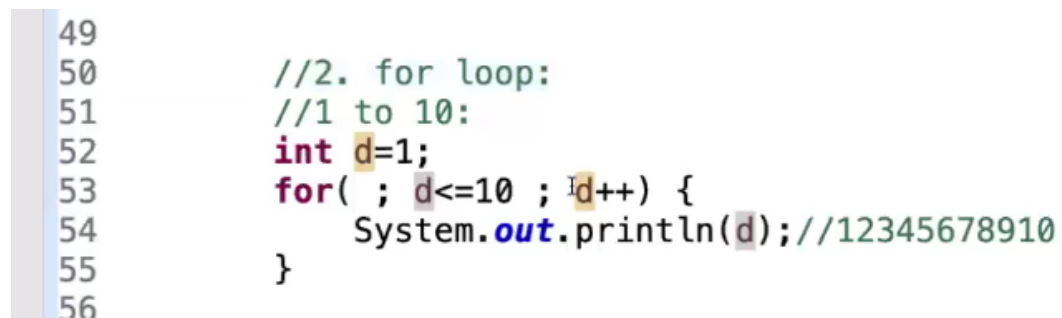

paste for 7

```

1 package com.day6;
2
3 public class for7 {
4
5
6     public static void main(String[] args) {
7
8         //another way to write for loop.
9         int i=1;
10
11         for (;i<=10;i++) {
12             System.out.println(i);
13             i++;
14         }
15     }
16
17 }
18
19 //1
20 //3
21 //5
22 //7
23 //9
24

```

```

49
50 //2. for loop:
51 //1 to 10:
52 int d=1;
53 for( ; d<=10 ; d++) {
54     System.out.println(d); //12345678910
55 }
56

```

Prints 1 to 10.

```

48
49
50      //2. for loop:
51      //1 to 10:
52      int d=1;
53      for( ; d<=10 ; ) {
54          System.out.println(d);//12345678910
55          d++;
56      }
57

```

Prints 1 to 10.

Note- colon is mandatory to write else error.

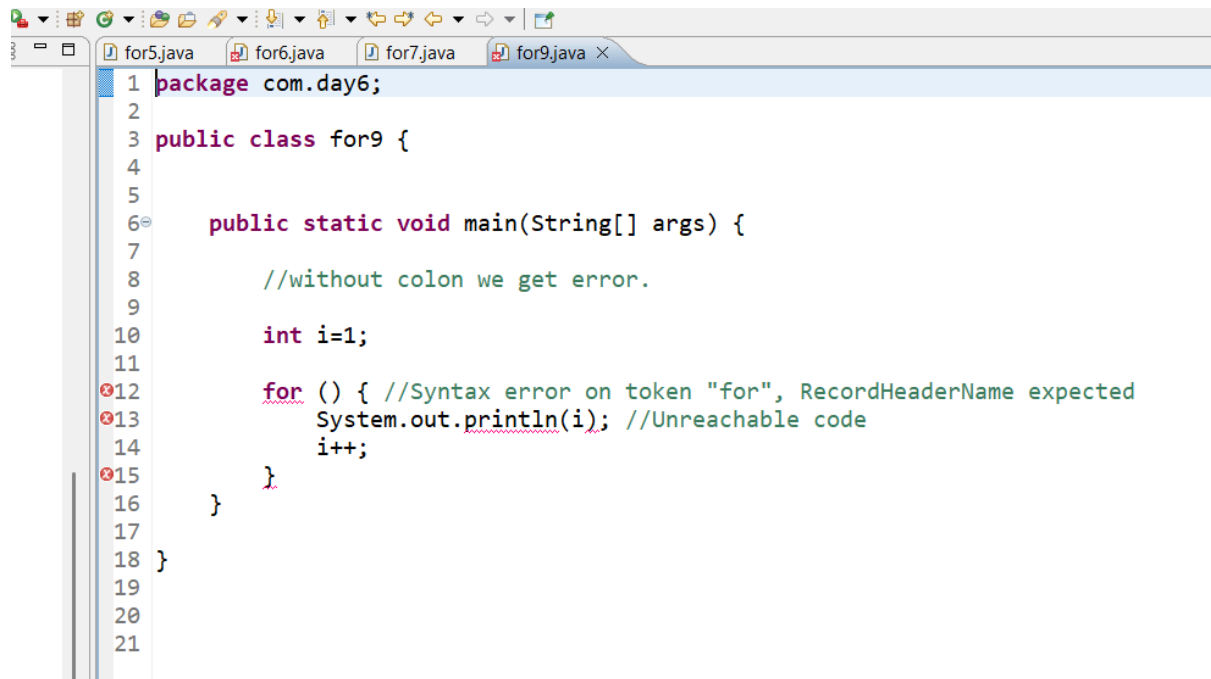

```

49
50      //2. for loop:
51      //1 to 10:
52      int d=1;
53      for( ; ; ) {
54          System.out.println(d);//12345678910
55          d++;
56      }
57

```

Infinite for loop starting from 1.

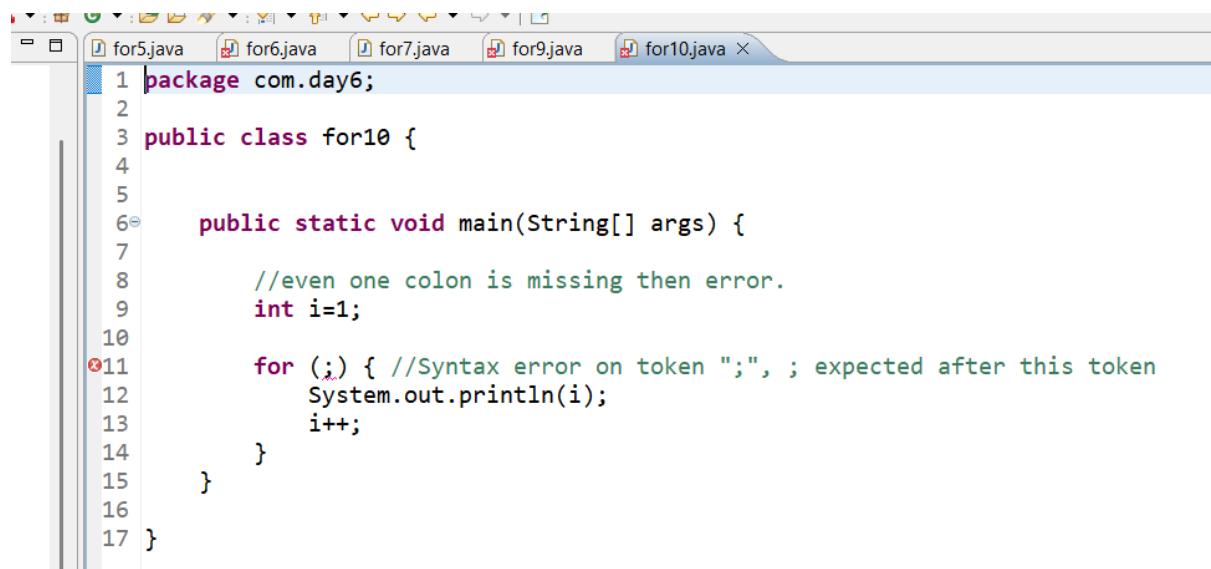

paste for 9, for 10 -

```

1 package com.day6;
2
3 public class for9 {
4
5
6     public static void main(String[] args) {
7
8         //without colon we get error.
9
10        int i=1;
11
12        for () { //Syntax error on token "for", RecordHeaderName expected
13            System.out.println(i); //Unreachable code
14            i++;
15        }
16    }
17
18 }
19
20
21

```

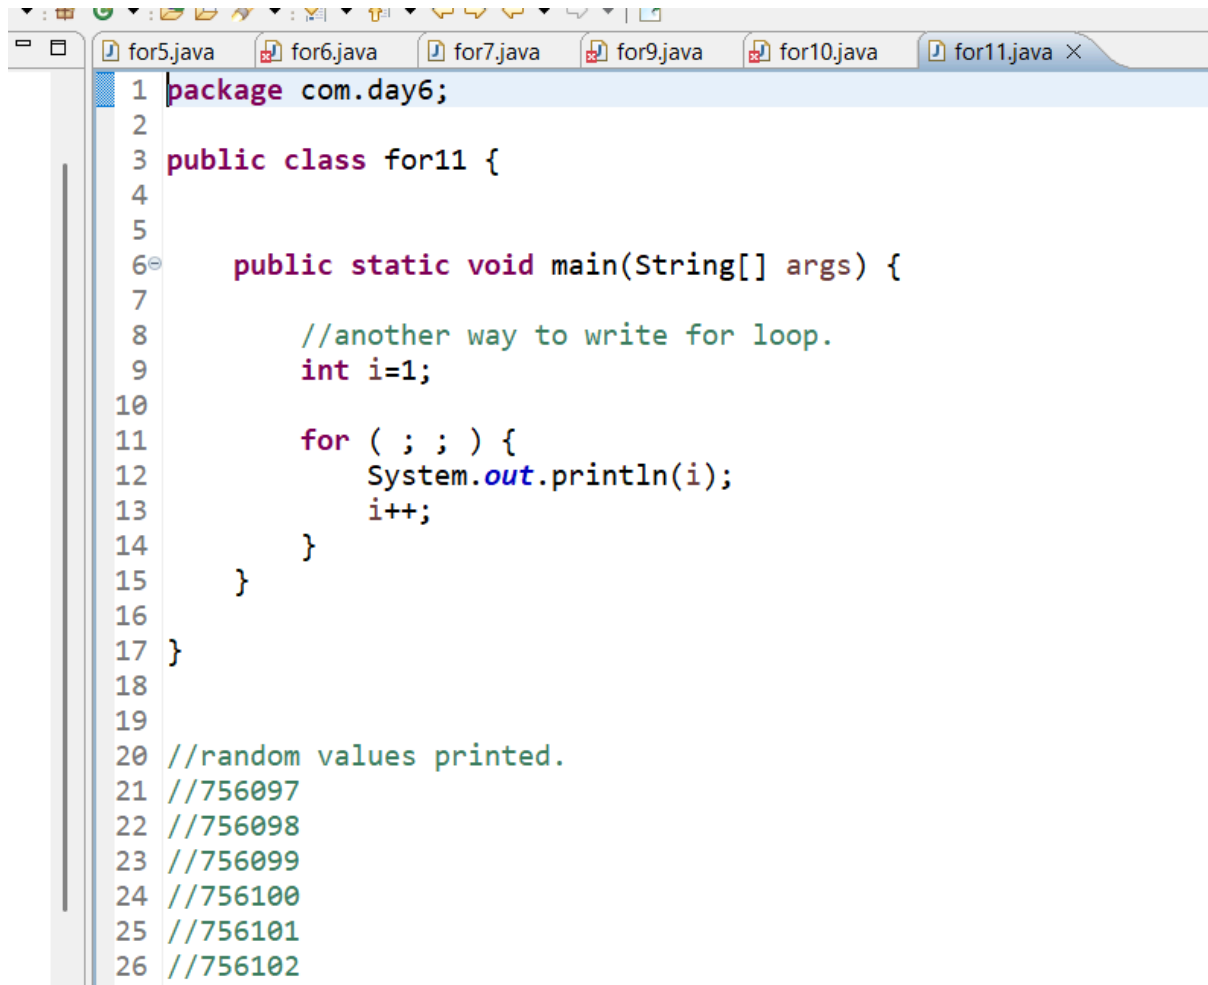

```

1 package com.day6;
2
3 public class for10 {
4
5
6     public static void main(String[] args) {
7
8         //even one colon is missing then error.
9         int i=1;
10
11        for (;) { //Syntax error on token ";", ; expected after this token
12            System.out.println(i);
13            i++;
14        }
15    }
16
17 }

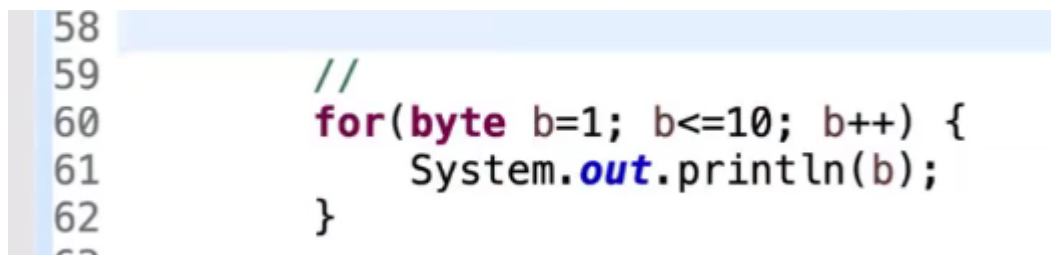

```

paste for 11 -

```
1 package com.day6;
2
3 public class for11 {
4
5
6     public static void main(String[] args) {
7
8         //another way to write for loop.
9         int i=1;
10
11         for ( ; ; ) {
12             System.out.println(i);
13             i++;
14         }
15     }
16
17 }
18
19
20 //random values printed.
21 //756097
22 //756098
23 //756099
24 //756100
25 //756101
26 //756102
```

Byte also works-

```
58
59         //
60         for(byte b=1; b<=10; b++) {
61             System.out.println(b);
62         }
```

prints 1 to 10.

Short also works-

```

59      //
60      for(short b=1; b<=10; b++) {
61          System.out.println(b);
62      }
63

```

prints 1 to 10.

Char-

```

66
67      for(char ch='a'; ch<='z'; ch++) {
68          System.out.println(ch);
69      }
70

```

Prints a to z.

Prints ascii table-

```

66      //a=97
67      //b=98
68      //z=122
69      for(char ch='a'; ch<='z'; ch++) {
70          System.out.println(ch + " = " + (byte)ch);
71      }

```

prints ascii of small letters.

Ascii for capital letters-

```

66 //a=97
67 //b=98
68 //z=122
69 for(char ch='A'; ch<='Z'; ch++) {
70     System.out.println(ch + " = " + (byte)ch);
71 }
72

```

K = 7
L = 7
M = 7
N = 7
O = 7
P = 8
Q = 8

prints ascii of capital letters.

Double also allowed-

```

73 System.out.println("-----");
74 //double:
75 for(double d=1.0; d<=5.0; d++) {
76     System.out.println(d);
77 }
78

```

Prints 1.0 to 5.0.

For with break-

```

52
53 for(int d=1 ; d<=10 ; d++ ) {
54     System.out.println(d);//12345678910
55     break;
56 }

```

Returns 1.

```

78
79
80 //when to use while loop:
81 //when number of iterations are not fixed, then use while loop
82 //calendar handling
83 //infinite scrolling on facebook, linkedin, swiggy, zomato
84 //wait for element on the page: 5, 10, 12, 15, 20, 0
85 //wait for page loading:
86 //webtable with pagination:
87 //carousels
88

```

```

89
90 //when to use for loop:
91 //when number of iterations are fixed, then use for loop
92 //month drop down: 1 to 12
93 //Arrays, ArrayList: for loop
94 //footer links
95 //drop downs with fixed data
96 //movie ticket for a movie: 120 seats
97

```

Infinite for loop-

```

98 //MOVIE TICKET FOR A MOVIE: 120 SEATS
99
100 for(;;) {
101     System.out.println("welcome to hotel TAJ");
102 }

```

Disco lights, name plate on shops are the uses.

Infinite while loop-

```

104 while(true) {
105     System.out.println("welcome to hotel TAJ");
106 }

```

Same as for loop.

Dead code example-

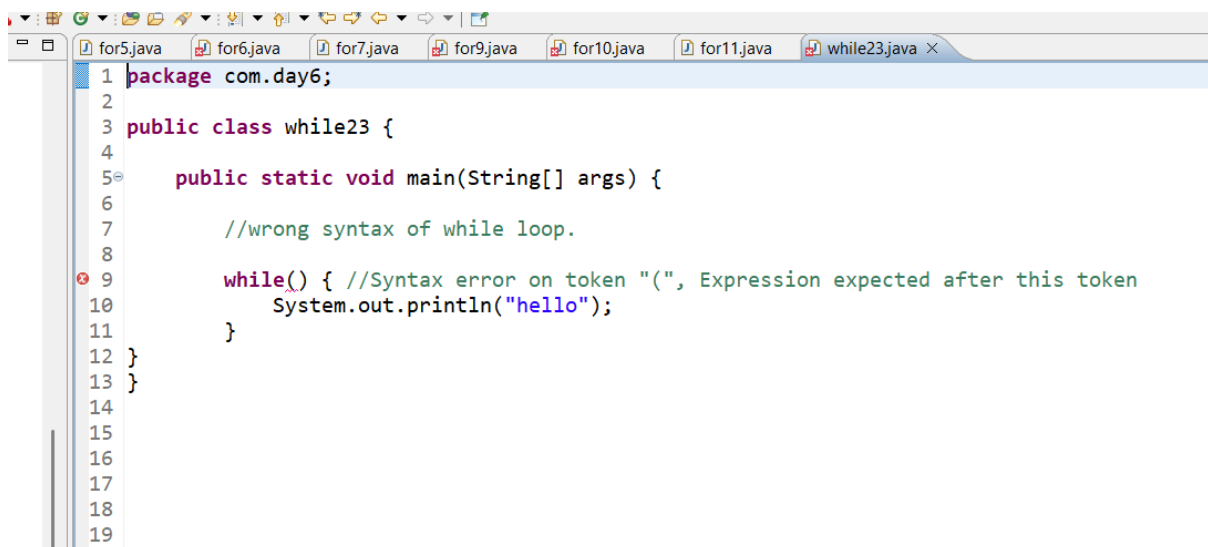

```

105
104 while(false) {
105     System.out.println("welcome to hotel TAJ");
106 }
107

```

Wrong syntax-

paste while 23

```

1 package com.day6;
2
3 public class while23 {
4
5     public static void main(String[] args) {
6
7         //wrong syntax of while loop.
8
9         while() { //Syntax error on token "(", Expression expected after this token
10             System.out.println("hello");
11         }
12     }
13 }
14
15
16
17
18
19

```

Note-

When we write `i++` or `++i`, then they work the same. Only when we assign to another variable, then the pre and post increment/decrement is applicable.

```

9          // 1. while loop:
10         int i = 1;
11         while (i <= 10) {
12             ++i;
13             System.out.println(i); // 12
14             // 11
15             // ++i;

```

Prints 2 to 11.

```

8          // 1. while loop:
9
10         int i = 1;
11         while (i <= 10) {
12             //System.out.println(i); // 1234567891011
13             //i++; // 11
14             // ++i;
15             // i=i+1;
16             // break;
17             System.out.println(++i); // 1234567891011
18
19         }
20

```

Prints 2 to 11.

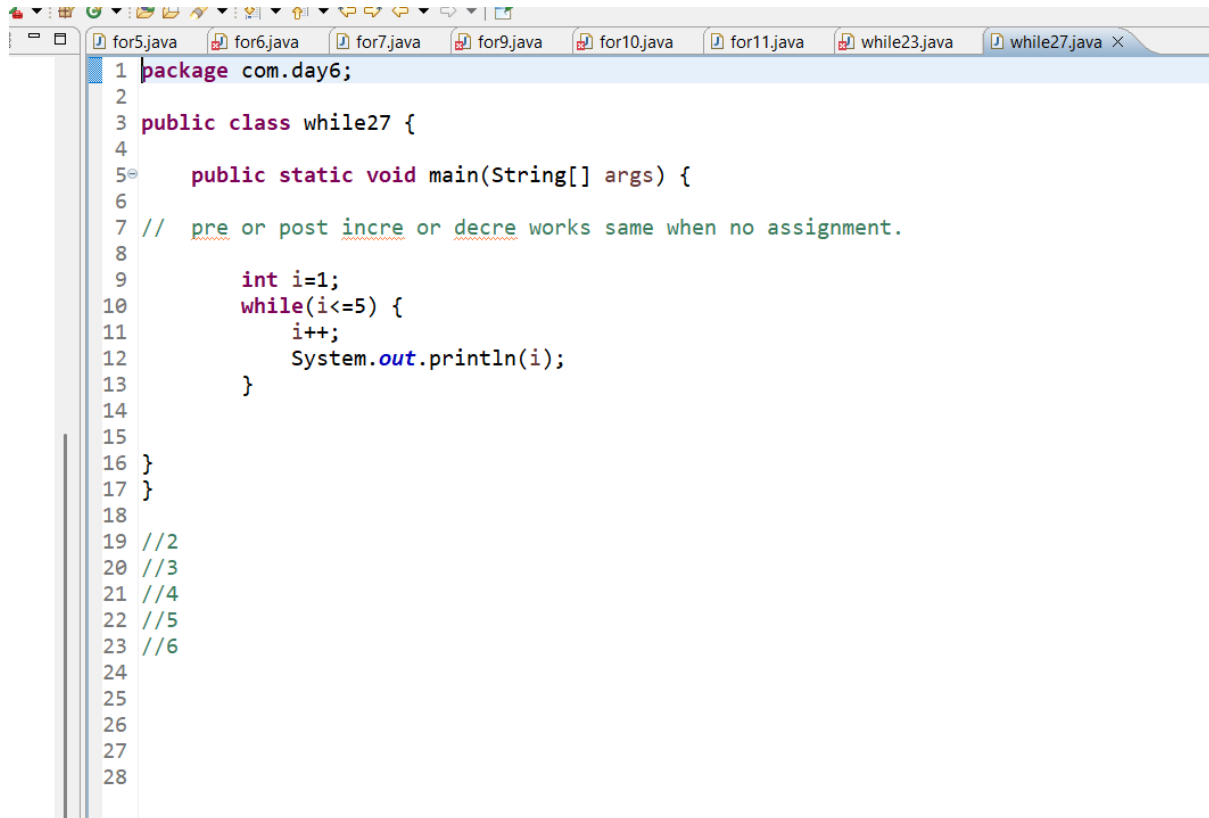

```

9          // 1. while loop:
10         int i = 1;
11         while (i <= 10) {
12             //System.out.println(i); // 1234567891011
13             //i++; // 11
14             // ++i;
15             // i=i+1;
16             // break;
17             System.out.println(i++); // 1234567891011
18
19         }
20

```

Prints 1 to 10.

paste while 27

```

1 package com.day6;
2
3 public class while27 {
4
5     public static void main(String[] args) {
6
7         // pre or post incre or decre works same when no assignment.
8
9         int i=1;
10        while(i<=5) {
11            i++;
12            System.out.println(i);
13        }
14
15    }
16 }
17
18
19 //2
20 //3
21 //4
22 //5
23 //6
24
25
26
27
28

```

```

111
112     byte h = 1; //127
113     while(true) {
114         h++;
115         System.out.println(h);
116     }
117
118
119

```

Prints 1 to 127 then prints -128 to 0 and then 0 to 127 and then -128 to 0 and this cycle continues.

```

118
119      System.out.println(10 + " " + 20);
120

```

Prints 10 20.

```

121
122
123      int m = 1;
124      while(m<=10) { //true
125          m++;
126          System.out.println(m);
127      }
128

```

Prints 2 to 11.

```

127 //      }
128
129      for(int m=1; m<=10;) {
130          m++;
131          System.out.println(m);
132      }
133

```

Prints 2 to 11.

Unreachable code-

```

127 //      }
128
129     for(int m=1; false;) {
130         m++;
131         System.out.println(m);
132     }
133

```

Infinite loop-

```

127 //      }
128
129     for(int m=1; true;) {
130         m++;
131         System.out.println(m);
132     }
133

```

prints random number infinite times.

Print 1 to 11-

```

127 //      }
128
129     for(int m=0; m<=10;) {
130         m++;
131         System.out.println(m);
132     }

```

Print 1 to 10-

```

127 //      }
128
129     for(int m=0; m<10;) {
130         m++;
131         System.out.println(m);
132     }
133
134

```

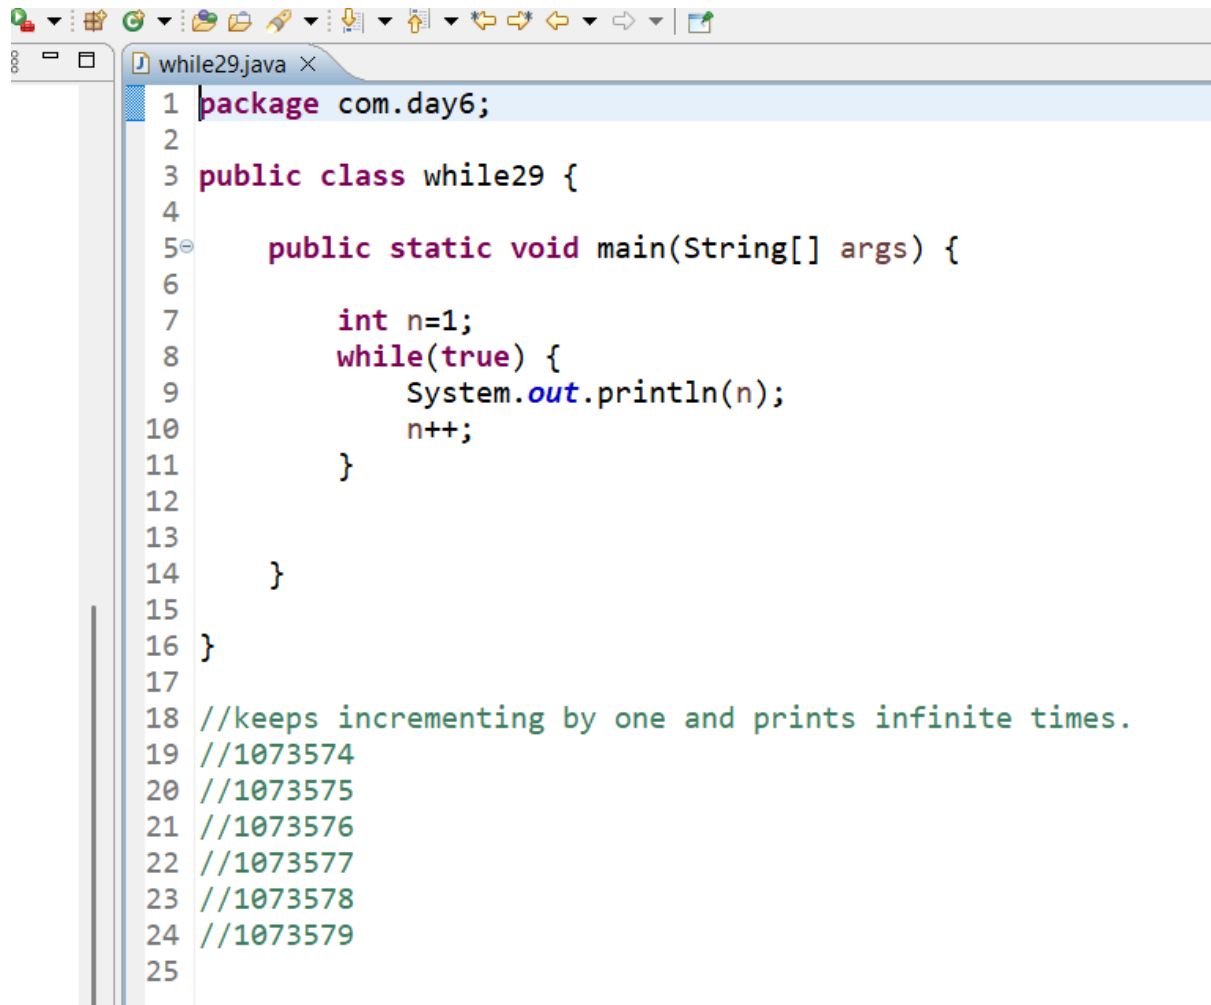

Print 1 to 10-

```

123
124     int n = 1;
125     while (true) {
126
127         System.out.println(n); //1
128         n++;
129         if(n==11) {
130             break;
131         }
132     }
133

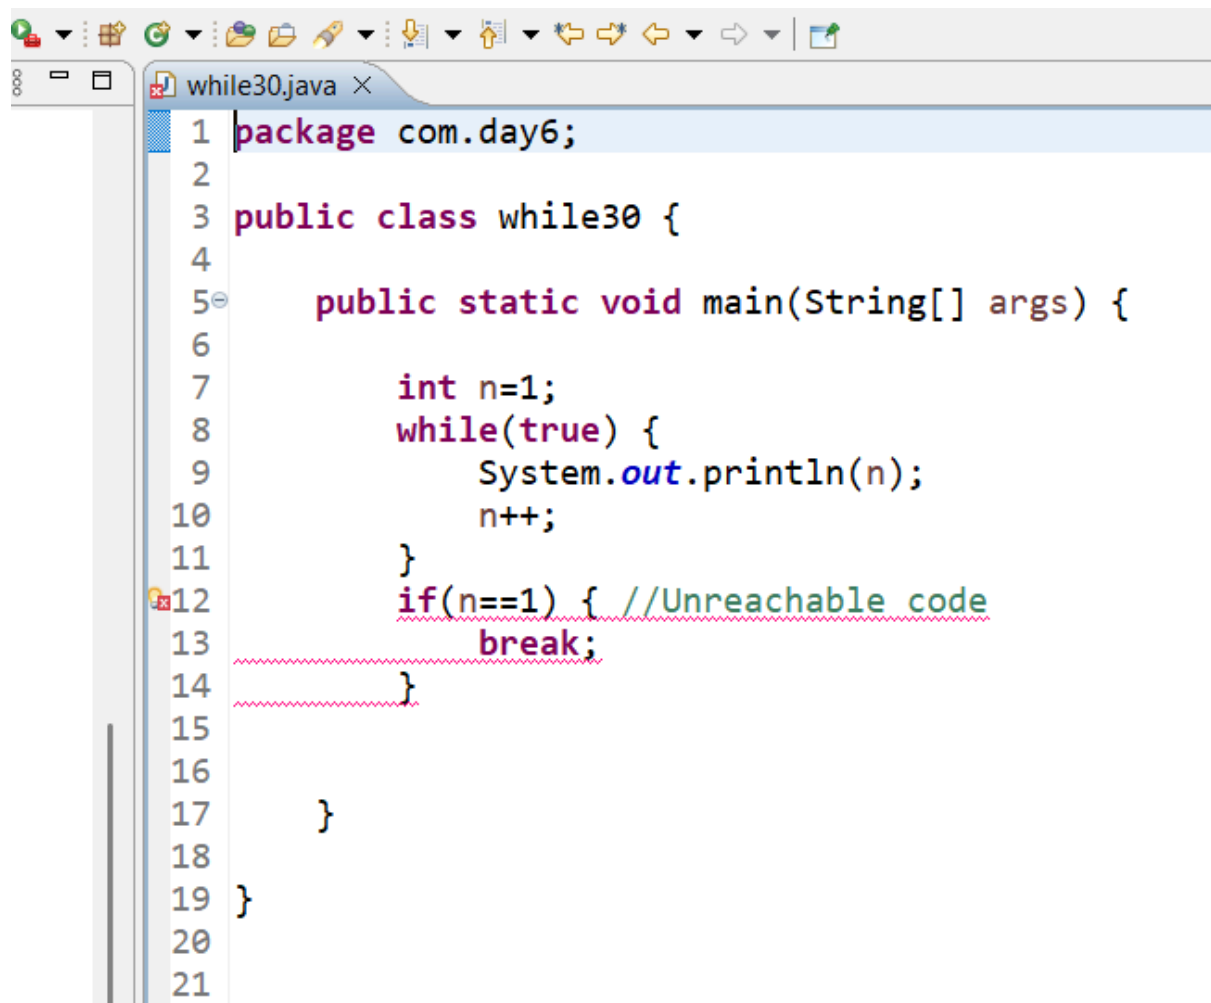

```

paste while 29-

```
1 package com.day6;
2
3 public class while29 {
4
5     public static void main(String[] args) {
6
7         int n=1;
8         while(true) {
9             System.out.println(n);
10            n++;
11        }
12
13
14    }
15
16 }
17
18 //keeps incrementing by one and prints infinite times.
19 //1073574
20 //1073575
21 //1073576
22 //1073577
23 //1073578
24 //1073579
25
```

paste while 30-

```
1 package com.day6;
2
3 public class while30 {
4
5     public static void main(String[] args) {
6
7         int n=1;
8         while(true) {
9             System.out.println(n);
10            n++;
11        }
12        if(n==1) { //Unreachable code
13            break;
14        }
15
16
17    }
18
19 }
20
21
```
